

Supplementary Figure — ML-based prioritisation of the 85 frozen Discovery proteins

Conditional on the locked 85-protein High-vs-Low Discovery panel. Not an unbiased generalisation estimate; not a validated biomarker panel.

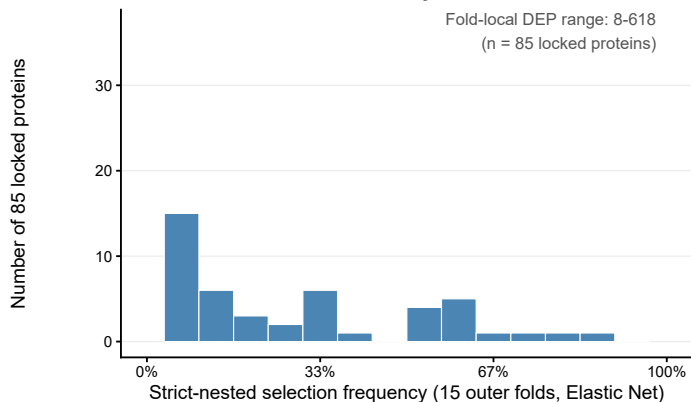

A Top XGBoost gain among the 85 locked Discovery proteins

B Penalised selection frequency (top 15 by Elastic Net)

C Strict-nested feature stability

D Discovery effect vs ML gain (all 85 locked proteins)
