

S-M09: KNN imputation sensitivity — overall exposure effect (E)

Full 515-cohort, Q515 universe (n=1430 proteins).

Pearson $r = 0.9741$; Spearman $r = 0.9644$; direction concordance = 1343/1430

Sensitivity analysis only — not validation. Source: M09_KNN_E_comparison.csv (repaired Phase 3).

Primary FDR<0.05: 0; KNN FDR<0.05: 0. Overall exposure family is null in both.
